### 1 Une interface 3D multi-échelle pour la visualisation et la navigation dans de grands documents XML

Christian Jacquemin, Michèle Jardino

 November 2002 **Proceedings of the 14th French-speaking conference on Human-computer interaction (Conférence Francophone sur l'Interaction Homme-Machine)**

 Full text available: pdf(691.45 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The visualization of large documents such as technical reports or professional manuals is an important issue. For this purpose, we have developed *3D-XV*, an interface for visualizing large structured documents through a hierarchical 3D-model. In addition to textual and structural information, the model associates thematic content with colors. In the query mode, passage relevance is described through local histograms. The core textual content can be accessed through textured ...

**Keywords:** 3D visualization, XML, text visualization, thematic clustering

### 2 Long papers: visualization and presentation: The centrality of pivotal points in the evolution of scientific networks

Chaomei Chen

 January 2005 **Proceedings of the 10th international conference on Intelligent user interfaces**

 Full text available: pdf(732.87 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In this paper, we describe the development of CiteSpace as an integrated environment for identifying and tracking thematic trends in scientific literature. The goal is to simplify the process of finding not only highly cited clusters of scientific articles, but also pivotal points and trails that are likely to characterize fundamental transitions of a knowledge domain as a whole. The trails of an advancing research field are captured through a sequence of snapshots of its intellectual structure ...

**Keywords:** betweenness centrality, information visualization, intellectual turning points, knowledge domain visualization, research fronts
